Filozofija zavesti

Izvleček

Vesoljstvo je polje zakodiranih informacij. Te se med seboj dinamično prepletajo v bolj organizirane enote in razpletajo v preprostejše oblike. Na določeni stopnji organiziranosti informacijskih kod nastane materialni svet, ob nadaljni organizaciji nastane živi svet. Najvišja stopnja zavesti je zaenkrat takšna stopnja organiziranosti zakodiranih informacij oziroma tak miselni svet, ki omogoča stik s poljem informacij in hkrati ozaveščanje tega procesa. Zaradi tega miselni svet lahko organizirano uporablja informacije iz polja v vesoljstvu.

Philosophy of consciousness

Abstract

The universe is a field of encoded information. These intertwine dynamically with each other into more complexly organized units and disentangle into simpler forms. At a certain level of organization of the information codes the material world arises and with further organization the living world is formed. The highest level of consciousness so far is such a level of the organization of the encoded information or such mental world which makes the contact with the information field as well as the awareness of this process possible. That is why the mental world can use the information from the universal field in an organized way.
